FAQS

Reasons for air bubble formations on Acrylic Sheets

Acrylic are bonded in extremely humid conditions

Use of water base synthetic resin adhesive any other than PEVA (Polyethylene Vinyl Acetate Co-polymer)

When substrate loses moisture after installation

Debonding in certain areas because of uneven substrate surface

Insufficient or lack of pressing during the bonding period of laminate

Use of large size acrylic/PVC laminate sheets

To avoid delamination / air bubbles in between ply and laminate the above steps should be taken care of. Bonding of acrylic sheets shouldn't be completed under high humidity

Disclaimer

The Products are tested to be reasonably free of defects, and when used and fabricated properly they will comply with the applicable manufacturing specifications within realistic deviations. We recommend customers to inspect products properly before installing. Product's warranty in no way covers defects and non-compliance from or otherwise attributable to any other causes, including, without limitation the following:

- Improper handling / transportation / storage of Ontari
- Improper installation of Ontari
- Improper or unintended usage of Ontari
- Lack of or improper maintenance of Ontari
- Exposure to high temperatures
- Unauthorized alteration to the products
- Outdoor applications
- Do not use plywood with high moisture content
- Do not use ply with uneven surface
- Avoid using inferior quality adhesive
- Apply sufficient pressure
- Avoid pasting of sheets on the printed/branding area of the Plywood
- There will be no guarantee or exchange under any circumstances
- Color variations in products from different batches are possible
- We recommend using products from same batch to avoid color variations
- This brochure is for presentation purposes only. Actual colors may differ.
